Re: Long Term Plan 2021 - 31 Submission

To whom it may concern,

Roofline Marlborough as part of Freeman Group wish to submit the attached proposal to the 2021 - 31 Long Term Plan. The recommendations within this proposal provide solutions to three unique issues to the Marlborough housing environment with the aim of creating healthier, safer homes for Marlburians while also contributing to the removal of heavy metals from our freshwater sources.

It aligns with Council activities on Community Support through Energy Efficiency as outlined in last years Annual Plan. We are seeking support from Council to expand the Voluntary Targeted Rates Scheme further to include the re-roofing of existing Marlborough dwellings by offering a funding service to ratepayers.

The findings within this report show that by doing so, we will maintain all previous efforts in lifting the quality of our housing stock and securing the health of the home and its occupants. We can also enhance the seismic performance of dwellings and improve the health of our waterways to help meet new national environmental standards of fresh water through the removal of zinc inputs from old galvanised roofing.

We hope you find this paper of use and look forward to discussing this and any other matters that would assist.

Kind Regards,

PAUL FROST
