

Submission from Penzance Tuna Bay Property Owners Association.

We support the existing Rai Valley transfer station for the community in Penzance Tennyson Inlet as we are accustomed to taking our own rubbish out to the t/f station.

We are opposed to any rubbish collection in Tennyson Inlet, this is an area of pristine beaches and outstanding scenic native bush, any collection of rubbish for recycling would encourage more rats, mice and cats to the area destroying years of community effort in towards eradicating them. I am aware the Rai Valley T/F station, despite being extremely neat and clean has up to 12 cats frequenting the site, imagine how attractive to the cats overflowing bins full of old fish scraps from the boating public would be.

People come from all over the country to access the walking tracks in Tennyson Inlet for the native bush and bird life, we need to ensure we do our utmost to preserve what we have not destroy it.

The extra trucks on the Tennyson Road will also take its toll on the road.

We the Penzance community have funded our own mulcher to mitigate the green waste issue.

The status quo has worked well for this area, all we ask for is better recycling and extended hours at the Rai Valley T/F Station.
