I have received quotes from cuddons engineering and ITM that I will attach.  
I have a basic plan but not in a form I can send.  
The labour to assemble will be from a local engineer and approximate as we are unsure exactly how long it may take. 3 to 4 days at 100/ hr.

Panels frames will be constructed of 25 x 25mm box steel at \$11.79/ m with cuddons cutting to measure at \$3 a cut.  
Panels will be filled with 19 mm structural ply wood or similar.  
There will be a top beam to hang the machines on of approx 250mmx 50mm  
I haven't received a quote for that but in my experience it will cost around \$150

25x25mm box steel 300m	\$3537
19mm structural plywood	\$2600
250mmx50mm top beam.	\$ 150
Hardware	\$ 300
Labour	\$ 2600

Total \$9187

All prices are excluding GST

There may be other things that have escaped my attention that may need purchasing but these are the bulk of the expenses.

Many thanks.
